

Hikvision Temperature Screening Solution

Current Situation

Traditional methods like using the ear thermometer or mercury thermometer perform well in detecting people with abnormal skin-surface temperature. However, all of these methods have obvious and significant deficiencies:

Close Contact, High Risk

- Close contact among users, leading to high risk of infection.

High Cost, Low Efficiency

- Lots of manpower invested.
- Person-by-person inspection is inefficient.

Difficult to Collect Statistics

- Manual registration is required, which may lead to human error and not so timely feedback.

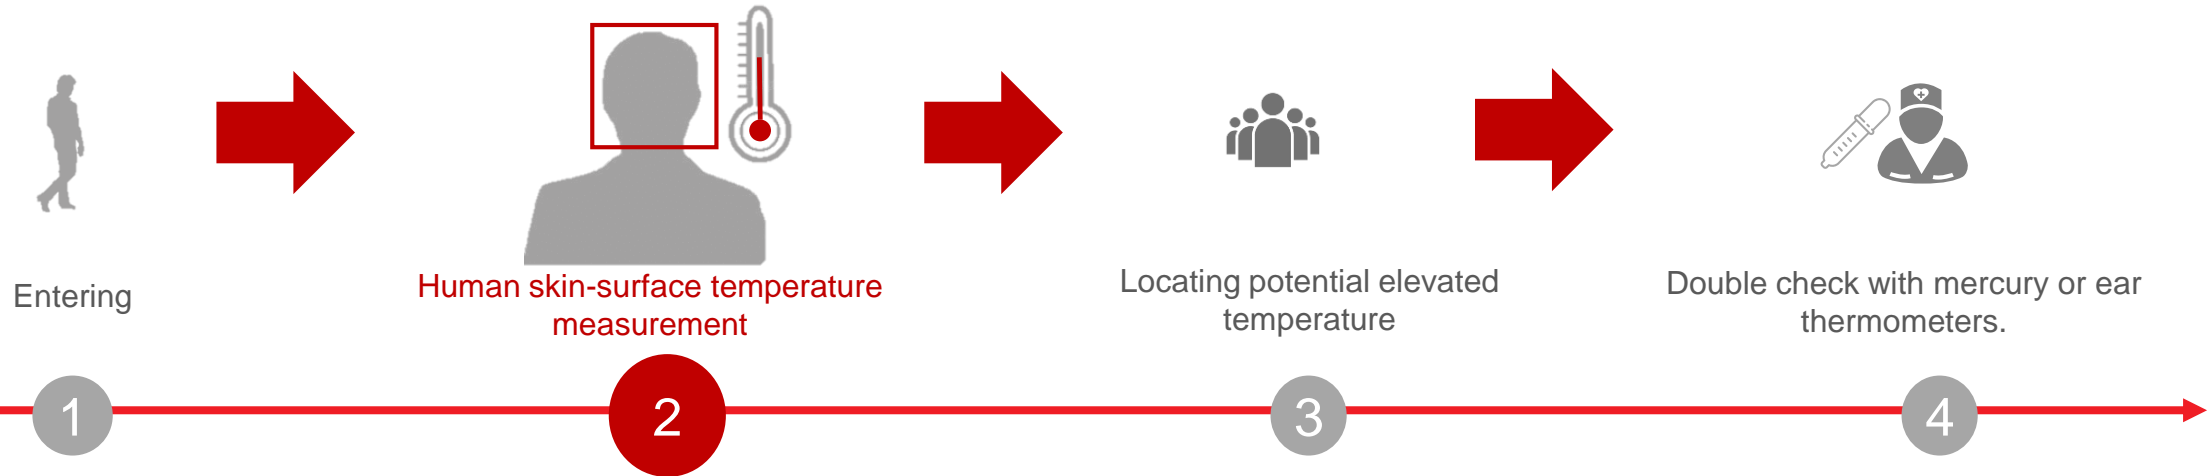

Solution Value

Using machines instead of manpower alone is a much better choice in many aspects.

- Reducing the contact among people. The detection process can be **fast and convenient**, as **imperceptible** as possible, and can minimize the impact on people's daily travel.
- Effectively **reducing manpower** and **the duration** of skin-surface temperature measurement.
- Producing **real-time and accurate temperature** measurement data for management and decision-making.

Solution Business Flow

Fast preliminary temperature screening without contact

SAFE

Distant and accurate check without physical contact, reducing cross-infection possibilities.

EFFICIENT

Automatic alarm triggering, reducing manpower invested.

ADAPTABLE

Multiple product types, easy to deploy, and suitable for different scenarios.

TRACEABLE

Combining temperature, image and face identification for easy management and query.
